

FINANCIAL HARDSHIP AMONG VETERANS: FLORIDA

In 2019, there were 1,373,676 military veterans in Florida. Overall, a majority of them have fared better economically than nonveterans, in line with a belief that our nation must meet veterans' basic needs given their service and sacrifice.

Yet in 2019, a substantial 400,837 of those who served our country struggled to make ends meet in Florida. According to the Federal Poverty Level (FPL), 6% of veterans in Florida (81,073) lived in poverty in 2019. But <u>United For ALICE</u> data shows that another 23% (319,764) — nearly four times as many — were also experiencing financial hardship, in households that earned above the FPL but not enough to afford the basics in the communities where they lived.

The reality is that more than one-quarter (29%) of all veterans in Florida lived in a household with income below the ALICE Threshold of Financial Survival in 2019. This includes households in poverty as well as those who were ALICE: Asset Limited, Income Constrained, Employed. ALICE households don't earn enough to afford housing, child care, food, transportation, health care, a smartphone plan, and taxes — the basics needed to live and work in the modern economy (see Key Terms, pg. 2). This ALICE in Focus Research Brief shows that there are veterans below the ALICE Threshold of all ages, races/ethnicities, and educational levels, in a variety of living arrangements and employment situations, across Florida and in every state. The share of veterans below the ALICE Threshold in 2019 ranged from 21% in Wisconsin to 36% in Louisiana.

Veterans by Household Financial Status, FL, 2019 Number of Veterans in Florida = 1,373,676

Note: This research uses American Community Survey Public Use Microdata Samples (ACS PUMS) and focuses on veterans, whose ALICE status is determined by their household's income compared to local cost of living. The data does not include veterans who are unhoused or living in group quarters. In this Brief, percentages are rounded to whole numbers for ease of reading, which may result in percentages totaling 99% or 101%. All numbers are presented in the ALICE Veterans Data Dashboard.

Sources: ALICE Threshold, 2019; U.S. Census Bureau, American Community Survey, PUMS, 2019

KEY FINDINGS

- Of the 1,373,676 veterans in Florida in 2019, 6% were below the FPL, and an additional 23% — nearly four times as many — were ALICE.
- While there are veterans from all racial/ethnic groups in Florida, economic inequities persist: 36% of American Indian/Alaska Native, 36% of Black, and 40% of Hispanic veterans lived in households below the ALICE Threshold in 2019, compared to 24% of Asian and 27% of White veterans.
- In 2019, more than half (57%) of veterans in Florida over the age of 25 had not completed postsecondary education. Of veterans who graduated high school but had not completed post-secondary education, 35% were below the ALICE Threshold.
- Veterans with disabilities faced higher rates of financial hardship in Florida: 36% lived in a household with income below the ALICE Threshold, compared to 26% of veterans without disabilities.
- In Florida, only 63% of veterans below the ALICE Threshold and 59% of veterans with disabilities below the Threshold had high-speed internet access in 2019.

DEFINING VETERAN STATUS

In this Brief, veterans are defined as those who were "on active duty in the past, but not now" as reported in the 2019 <u>U.S.</u>

<u>Census Bureau's American Community Survey</u> (ACS). This ALICE research uses the ACS definition and dataset because it is the only public source that includes both veteran status and the information needed to determine a person's ALICE household status — their household composition, income, and location. The ACS asks whether each member of a household has ever served on active duty in the U.S. Armed Forces, Reserves, or National Guard, as outlined in the table below.

Military Service, Florida, 2019	Total Number	Percent Below ALICE Threshold (Poverty + ALICE)	
Veteran: On active duty in the past, but not now	1,373,676	29%	
Only on active duty for training in Reserves/National Guard	202,498	31%	
On active duty	55,044	22%	

Note: Only one response allowed per person; categories are mutually exclusive.

This ALICE in Focus analysis does not include:

- Veterans living in Census-defined "group quarters":
 This includes 6,968 veterans in Florida living in non-institutional group quarters (such as college dormitories or group homes) and 18,232 in institutional group quarters (such as nursing homes or correctional facilities). Because the cost of living in these settings differs substantially from the cost of living in a household, the ALICE status of these veterans cannot be determined.
- Veterans experiencing homelessness: The ACS does not fully capture veterans who are not living permanently in households. However, the U.S. Department of Housing and Urban Development's <u>Point-In-Time Estimate of</u> <u>Homelessness</u> reported 2,436 homeless veterans in Florida in 2020.

Key Terms

- Veteran: A person who is not on active duty with the U.S. military but was in the past. This does not include people who were only on active duty for training in the Reserves/National Guard.
- ALICE: Asset Limited, Income Constrained, Employed – households that earn above the Federal Poverty Level (FPL) but cannot afford the basic cost of living in their county. While the FPL for a family of four in 2019 was \$25,750, the average bare-minimum cost of living for a family according to the ALICE Household Survival Budget in Florida was nearly \$70,000. Despite struggling to make ends meet, ALICE households often do not qualify for public assistance.
- ALICE Threshold: Derived from the Household Survival Budget, the average income that a household needs to afford housing, child care, food, transportation, health care, and a smartphone plan, plus taxes. Calculated for various household types for every U.S. state and county.
- Below ALICE Threshold: Includes people in poverty-level and ALICE households combined.

ALICE Veterans Data Dashboard

Visit the ALICE Veterans Data Dashboard to explore more than 100 variables related to veterans in financial hardship by:

- State, regional, and local geographies
- Demographic categories including age, race/ethnicity, sex, and education
- Household characteristics like work status and living arrangements
- Access to key resources

Visit UnitedForALICE.org/Focus-Veterans

Throughout this Brief, the two primary groups being compared are veterans (on active duty in the past, but not now) and those who never served. This Brief does not include analysis of those currently on active duty or those only on active duty for training in the Reserves/National Guard; additional research may provide interesting findings about hardship in these groups.

DEMOGRAPHICS

Veterans span all categories of age, sex, race/ethnicity, national origin, disability status, educational level, living arrangements, and work status. Nationally, veterans are less likely to have income below the ALICE Threshold (27%) than those who never served in the military (35%); the same is true in Florida (29% of veterans vs. 41% of those who never served). However, veterans from certain demographic groups - including those that have faced a long history of systemic racism and sexism both within and outside the military - have higher rates of financial hardship. Nationally, compared to veterans overall, there are increased rates of financial hardship for veterans who are female; are Black, Indigenous, and other people of color; have a disability; and/or were born outside of the U.S., as well as for other groups - like lesbian, gay, bisexual, transgender, and queer (LGBTQ+) individuals - who are not fully represented in the ACS data. The intersectionality of these demographic groups further increases financial hardship for veterans with more than one of these identities.

Age

While there are veterans of all ages, older people are more likely to have served because the draft, which lasted from 1948 to 1973, required eligible males to serve. More than half of veterans in Florida were seniors (age 65+) in 2019, split almost evenly between those age 65–74 (356,718) and those age 75 and older (390,522). Among veterans age 64 and under, 424,973 were age 45–64, 185,527 were age 25–44, and 15,936 were age 17–24.

By age, the youngest and oldest veterans faced the highest rates of financial hardship: 43% of those under age 25 were below the ALICE Threshold in 2019, as were 32% of those age 75 and older. But at all ages, in 2019, veterans were less likely to face financial hardship than their counterparts who never served.

Veterans by Age, Florida, 2019	Percent Veterans Below ALICE Threshold	Percent Never Served Below ALICE Threshold	
17-24 Years	43%	51%	
25-44 Years	31%	42%	
45-64 Years	26%	35%	
65-74 Years	29%	39%	
75+ Years	32%	48%	

Sex

In 2019, the ACS included only one question on sex with only two options — "male" or "female" — and respondents were not able to report gender identity or sexual orientation. The ALICE data reflects these limited options.

Overall, in 2019, 91% of veterans in Florida were male (1,244,033) with only 129,643 female veterans. While the percentage of women in the military has grown steadily over the last few decades, they continue to be under-represented, especially in positions of leadership. Efforts are underway to encourage the participation of women in the armed forces, including strengthening career paths, supporting continuity of service for women after having children, and amplifying women's military experiences and successes in recruitment efforts.

The rate of financial hardship between sexes was similar in 2019: 29% of male and 31% of female veterans were below the ALICE Threshold in Florida. This is a lower rate than for males and females who never served (39% vs. 42%, respectively).

Neither the ACS nor the military report data on LGBTQ+ service members or veterans. However, research by other organizations estimates that there are approximately one million lesbian, gay, bisexual, and transgender veterans in the U.S. The easing of discriminatory policies against LGBTQ+ service personnel has contributed to a more diverse and inclusive military. However, many military policies related to LGBTQ+ service members are still in flux, and LGBTQ+ people both within and outside of the armed forces continue to face systemic challenges, such as discrimination in employment, higher rates of mental health conditions, and limited access to LGBTQ+ inclusive health care and community services.

Race/Ethnicity and Nativity

People of all racial/ethnic groups serve in the military, and those who have served since 9/11 are even more diverse than their predecessors. In 2019, veterans in Florida were 77% White, 11% Black, 9% Hispanic, 1% Asian, 1% of two or more races, and less than 1% each American Indian/Alaska Native and Native Hawaiian/Pacific Islander. The largest number of veterans below the ALICE Threshold were found in the largest racial/ethnic populations: predominantly White (285,847), Black (53,610), and Hispanic (48,985).

Yet by percentage, Black, Hispanic, American Indian/ Alaska Native, Native Hawaiian/Pacific Islander veterans, as well as veterans of two or more races faced higher rates of financial hardship as a result of persistent racism, discrimination, and systemic barriers that limit these veterans' access to resources and opportunities for financial stability. In Florida in 2019, 34% of Native Hawaiian/Pacific Islander veterans, 36% each of American Indian/Alaska Native veterans, Black veterans, and veterans of two or more races, and 40% of Hispanic veterans lived in households below the ALICE Threshold, compared to 24% of Asian and 27% of White veterans. These disparities in financial hardship were mirrored in the general population, but for veterans, they were a particular extension of the unequal distribution of the housing, training, and employment protections promised in the post-WWII G.I. Bill. In 2019, however, veterans across all racial/ethnic groups were still less likely to face financial hardship than their counterparts who never served (except for American Indian/Alaska Native veterans, who had a slightly higher rate than those who didn't serve).

Veterans by Race/Ethnicity, Florida, 2019	Percent Veterans Below ALICE Threshold	Percent Never Served Below ALICE Threshold	
American Indian/Alaska Native	36% 34%		
Asian	24%	39%	
Black	36%	56%	
Hispanic	40%	53%	
Native Hawaiian/ Pacific Islander	34% 46%		
Two or More Races	36%	41%	
White	27%	31%	

Note: All racial categories except Two or More Races are for one race alone. The Hispanic group may include veterans of any race.

Both English-speaking ability and whether an individual was born outside of the U.S. also have an impact on veteran hardship. Veterans born outside of the U.S. made up only 6% of all veterans in Florida in 2019 but were slightly more likely to be below the ALICE Threshold (34%) than veterans born in the U.S. (29%). Rates of financial hardship were considerably higher (60%) for the 11,881 veterans living in a household with limited English-speaking ability.

Disability Status

As a result of medical advances, military personnel are now more likely to survive a significant injury in combat, thereby increasing the number of veterans living with service-related disabilities. In 2019, 25% of veterans in Florida reported service-related disabilities as defined by having a U.S. Department of Veterans Affairs (VA) disability rating. More generally, almost one-third of veterans (30%) reported having a disability (whether service-related or not), defined by the ACS as a cognitive, hearing, vision, or ambulatory disability, or one that makes self-care or independent living difficult.

Veterans with disabilities were more likely to face financial hardship in 2019: 36% lived in a household with income below the ALICE Threshold, compared to 26% of veterans without disabilities. The rate of financial hardship for veterans with service-related disabilities was closer to that of veterans without disabilities (25%). But the rate of hardship for all veterans with disabilities was still much lower than for people with disabilities in

Florida who never served (55%). This is in part a reflection of the additional services many veterans with disabilities receive — such as <u>disability</u> compensation for those with service-related disabilities and other benefits from the VA — as well as broader public assistance programs like <u>Supplemental Security Income</u> (SSI), <u>Social Security Disability Insurance</u> (SSDI), and Medicaid.

In 2019, the number of veterans with disabilities in Florida increased steadily with age, from just under 30,000 veterans with disabilities under the age of 45 to more than 185,000 who were age 75 and older. However, the rate of financial hardship was highest for the youngest veterans with disabilities: 45% of veterans with disabilities age 17–24 were below the Threshold, compared to 32% of veterans with disabilities age 65–74 and 36% of veterans with disabilities age 75+.

Among veterans with disabilities, there were also gaps in financial hardship by race/ethnicity, with rates ranging from 14% below the ALICE Threshold for Asian veterans with disabilities to 56% for veterans with disabilities of two or more races.

Educational Attainment

In 2019, veterans in Florida were more likely than those who never served to have a high school diploma (95% vs. 88%). These findings are not surprising, as a high school diploma or equivalent is part of the enlistment criteria for the armed forces.

Yet because the majority of veterans enroll in the military soon after high school, it generally takes them longer to attain post-secondary educational goals. In 2019, more than half (57%) of veterans in Florida over the age of 25 had not completed post-secondary education, despite VA benefits that help veterans with educational needs — like paying college tuition, finding the right school or training program, and getting career counseling. Half of veterans (52%) had only a high school diploma or equivalent in 2019, compared to 47% of those who never served. Among people who achieved a post-secondary degree, veterans were slightly more likely than those who never served to attain an associate degree (26% vs. 24%) but less likely to earn a bachelor's degree (42% vs. 48%).

However, across all educational levels from high school on, veterans in Florida were less likely than those who never served to be below the ALICE Threshold. For example, 35% of veterans age 25 and older who graduated high school but didn't complete post-secondary education were below the ALICE Threshold in Florida in 2019, compared to 46% of their peers who never served.

Educational disparities by race/ethnicity persisted among veterans. In 2019, 26% of Black and 29% of Hispanic veterans in Florida had a bachelor's degree or above, compared to 33% of White veterans. And at every educational level from high school on, Black and Hispanic veterans were more likely to be below the ALICE Threshold than White veterans.

There were also disparities by sex. Female veterans in Florida (age 25 and older) with a high school diploma, associate degree, or bachelor's degree were more likely to be below the ALICE Threshold than male veterans age 25 and older at the same level of education. For example, 27% of female veterans with an associate degree were below the ALICE Threshold vs. 24% of males, while 22% of female veterans with a bachelor's degree were below the Threshold vs. 18% of males. The rate of financial hardship for female and male veterans with a doctoral degree, master's degree, or professional degree was the same (13%).

Work Status

Employment: In Florida in 2019, there were 470,931 veterans age 17–64 in the labor force, accounting for 5% of the total labor force population. Over three-fourths (77%) of all Floridians age 17–64 were in the labor force, but veterans in this group were more likely to have the stability of full-time employment (86%) than those who never served (77%).

Whether working full or part time, veterans were less likely to be below the ALICE Threshold than people who never served: 18% of veterans working full time were below the ALICE Threshold compared to 30% of full-time workers who never served. For veterans who worked part time, the rate of financial hardship was 40%, compared to 49% for part-time workers who never served.

Overall, veterans facing financial hardship were concentrated in occupations with low median hourly wages. In 2019, the most common occupations for veterans below the ALICE Threshold in Florida were delivery/sales driver (median wage of \$15.17 per hour),

retail salesperson (\$11.39), customer service representative (\$15.56), landscaper (\$13.30), and laborer/mover (\$13.07). Of these top occupations, veterans working as a laborer/mover or a landscaper had the highest rates of financial hardship (with 46% and 49%, respectively, below the Threshold).

Military service can also impact employment and advancement opportunities for spouses and partners. For example, nationally, military spouses (nearly 90% of whom are female) are more likely to be unemployed or underemployed compared to their civilian peers. Even after their spouses' service has ended, challenges — like frequent relocation during prime earning years — can limit career advancement and overall earnings.

Unemployment: Thanks to public and private efforts to prioritize hiring for veterans, there is a relatively low veteran unemployment rate in Florida in 2019 (3%), the same rate as for people who never served. Unemployment rates were also the same for veterans with disabilities and for people with disabilities who never served (4%). Nonetheless, many veterans with disabilities face barriers to employment, including discrimination, accessibility issues, income and asset limits for public benefits programs, and transportation challenges.

Out of Labor Force: One fourth (25%) of veterans in Florida age 17–64 (155,505) were out of the labor force (not employed and not looking for work) in 2019, slightly higher than the rate for those who never served (23%). Yet veterans out of the labor force were less likely to be below the ALICE Threshold than those who never served (47% vs. 59%).

In Florida in 2019, 55% of veterans with disabilities (age 17–64) were out of the labor force compared to 18% of veterans without disabilities. However, veterans with disabilities (age 17–64) were still more likely to be working than people with disabilities who never served (41% vs. 36%).

Seniors: Seniors (age 65 and over) in Florida are <u>staying</u> in the labor force longer, and in 2019, 14% of senior veterans were in the labor force (lower than the rate for seniors who never served, at 17%). Of seniors in the labor force in Florida, 17% of veterans were below the ALICE Threshold, compared to 24% of seniors who never served.

Support Workers for Veterans: Many veterans, especially older veterans and those with disabilities, rely on <u>direct care workers</u> or <u>direct support professionals</u>, who provide support for daily living and other essential activities. For years, both fields have faced significant challenges hiring and retaining staff, a situation made even more difficult by the pandemic as providers

compete with offers of less demanding entry-level work at higher wages. For example, in the direct care field, made up of workers who are <u>primarily women and people of color, and often immigrants</u>, staffing challenges were heightened during the pandemic as workers faced increased <u>levels of uncertainty and physical and mental stress</u>. In Florida in 2019, home health aides and personal care aides earned \$11.22 per hour.

These groups — veterans and support workers — are closely intertwined: In Florida in 2019, almost 1,500 personal care aides were themselves veterans, with 32% below the ALICE Threshold; and almost 180 home health aides were veterans, with 42% below the Threshold.

Living Arrangements

Veterans who are ALICE live in households of varying size and composition. Both of these factors impact financial stability, as do marital status and presence of children.

Nearly two-thirds (63%) of veterans in Florida (867,677) were married in 2019, 31% (421,122) were single, and 6% (84,877) were in an unmarried partnership. Rates of financial hardship differed across these groups: 24% of married veterans, 29% of veterans in unmarried partnerships, and 40% of single veterans were below the ALICE Threshold in 2019.

Having children increased the likelihood of financial hardship for veterans. Of the 227,311 veterans living in households with children in Florida in 2019, over one-third (38%) were below the ALICE Threshold, compared to 29% of all veterans.

Veterans in Florida age 17-24 were less likely to live with their parents than their peers who never served (59% vs. 71%).

Overall, the most common household size for veterans in Florida was two people (the same as for people who never served). However, 241,718 veterans (18% of all veterans) lived alone in Florida in 2019. Veterans with disabilities in the state were more likely than veterans without disabilities to live alone: 85,421 veterans with disabilities lived alone in 2019. And veterans who lived alone were more likely to be below the ALICE Threshold (40%) than veterans who lived with one or more other people (27%).

Senior veterans (age 65+) in Florida lived alone at even higher rates than veterans age 17–64 (20% vs. 14%). And senior veterans who lived alone were more likely to be below the ALICE Threshold (43%) than those living with one or more other people (27%).

ALICE VETERANS, MILITARY BASES, AND VHA FACILITIES

Nationwide, there are approximately 200 military bases (and thousands of additional military facilities) covering more than 25 million acres. These bases and facilities are used for research, education, training and housing troops, and maintaining and testing weapons systems. They often provide employment for active-duty personnel as well as civilians, many of whom are veterans. In addition, <u>Veterans Health Administration</u> (VHA) facilities are important to the <u>well-being</u> of veterans. <u>Visit the Local Maps tab</u> of the *ALICE in Focus: Veterans* webpage to explore where veterans live, and how their financial hardship varies by location and proximity to military bases (gold triangles) and VHA facilities (red dots).

Across the country, there are on average 69 veterans per 1,000 people. Communities adjacent to the following large bases have rates over 100 veterans per 1,000 people:

- Eglin Air Force Base in Holt, FL
- Fort Bliss in El Paso, TX
- Fort Campbell in Clarksville, TN
- Fort Drum in Evans Mills, NY

- Fort Hood in Killeen, TX
- Fort Polk in Vernon Parish, LA
- Joint Base McGuire-Dix-Lakehurst in New Hanover, NJ

Service Era

Financial hardship among veterans in 2019 also differed according to the periods of time during which they served, including both periods of conflict and peacetime. The ACS groups veterans by their military service era, as shown in the table below.

Veterans by Service Era, Florida, 2019	Total Number of Veterans	Percent Below ALICE Threshold (Poverty + ALICE)
Post-9/11 Era (September 2001 to December 2019)	154,646	34%
Persian Gulf War Era (August 1990 to August 2001)	164,115	23%
Between Gulf and Vietnam (May 1975 to July 1990)	190,417	31%
Vietnam Era (August 1964 to April 1975)	460,932	30%
Between Korea and Vietnam (February 1955 to July 1964)	123,509	34%
Korean War (July 1950 to January 1955)	88,606	37%
Between Korea and WWII (January 1947 to June 1950)	4,545	40%
World War II (December 1941 to December 1946)	27,691	42%
More than one era	158,807	17%

Note: This table shows how many veterans served only in the era listed; those serving in more than one period are grouped together in the last row. The number of veterans in each group and the percentage who were below the ALICE Threshold represent 2019 point-in-time data. They do not represent the total number of people who served in each period, nor the financial hardship experienced during service.

The largest number of veterans in Florida served during the Vietnam Era (460,932), followed by those who served between the Gulf Era and Vietnam (190,417) and those who served in the Persian Gulf War Era (164,115).

Overall, veterans from the earliest service periods experienced higher rates of hardship in 2019 than

veterans from more recent time periods. Thirty-four percent or less of those who served during the Vietnam Era or later were below the ALICE Threshold, compared to 37% of Korean War veterans and 42% of World War II veterans. The lowest rate of financial hardship was for those who served in the Persian Gulf War Era (23%), who were more likely to be in their prime working years in 2019.

Age and the presence of a disability are both linked to higher rates of financial hardship. Because rates of disability increase with age, it is not surprising that the percentage of veterans with disabilities in Florida is highest among those who served in earlier periods: 71% of World War II veterans, 54% of Korean War veterans, and 34% of Vietnam Era veterans had disabilities in 2019, compared to 16% of those who served since 1990.

Longer-term military service is linked to greater likelihood of financial stability. In fact, of the 158,807 veterans in Florida who served in more than one service era, only 17% were below the ALICE Threshold, a lower rate than for any single era of service. This may in part be due to steady employment, as well as many military financial benefits (including housing subsidies, and free college for themselves or a spouse or child) that allow these veterans to save money so that they can take advantage of further cost savings, such as low-cost retirement-savings plans and no-money-down mortgages. In addition, those who have completed 20 years of active service are eligible for additional retirement benefits.

While women have long volunteered to protect their country, their <u>integration into the armed services</u> only started after WWII and has advanced slowly. The first legislation allowing women into the military passed in 1948, but women were only permitted into the military service academies starting in the 1970s, and it wasn't until the 1990s that they could fly combat missions or serve on Navy combat ships.

The largest number of female veterans in Florida served in the Post-9/11 Era (28,821), followed by the period between the Gulf War and Vietnam (28,250). Differences in financial hardship by sex varied by service era. For example, 38% of female Vietnam veterans were below the ALICE Threshold in Florida in 2019, compared to 29% of males. For those who served during the Post-9/11 period, 28% of female veterans were below the Threshold, compared to 35% of males.

There were also gaps by race/ethnicity for veterans from each period of service. For example, among Vietnam veterans in Florida, 27% of White veterans were below the ALICE Threshold, compared to 29% of Asian, 34% of American Indian/Alaska Native, 42% of Hispanic, and 47% of Black veterans.

Veterans by Household Financial Status and Key Demographics, Florida, 2019

Employed Full Time	406,846	73,776	2% 16%	82%
Employed Part Time	45,325	18,276	7% 33%	60%
Unemployed	18,760	8,909	14% 53%	
Not in Labor Force	155,505	72,403	17% 30%	53%

Note: Percentages are rounded to whole numbers for ease of reading, which may result in percentages totaling 99% or 101%. The groups shown in this figure overlap across categories (Age, Sex, Disability Status, Race/Ethnicity, Educational Attainment, and Work Status). Sex includes the sex reported by the respondent for household members; the ACS only includes the options "male" or "female." All racial categories except Two or More Races are for one race alone. The Hispanic group may include veterans of any race. The Educational Attainment category includes veterans age 25+ and is based on highest level of educational attainment. The Work category includes only veterans age 17–64. View more on the ALICE Veterans Data Dashboard.

ACCESS TO RESOURCES

Despite public and private programs that support veterans in areas such as employment, housing, access to health services, education, and public transportation, some veterans still lack access to basic resources. This is especially true for veterans with disabilities or mental health issues who need accessible services. Veterans below the ALICE Threshold are more likely to lack access to stable housing, health insurance, and reliable technology. At the same time, many veterans who struggle to afford the basics are not eligible for public assistance programs. When these household necessities are at risk, there are both short-and-long-term-cumulative consequences.

Stable Housing

Housing stability has a profound positive impact on overall well-being. People who live in owner-occupied housing are <u>less likely to move and more likely to build</u> assets over time.

There were also large differences in homeownership by income. Not surprisingly, veterans below the ALICE Threshold had a lower homeownership rate than veterans above the Threshold (72% vs. 85%).

In terms of race/ethnicity, overall, military service and veteran's assistance increased rates of homeownership for all racial/ethnic groups and reduced gaps between them, compared to those who never served. But notably, there continued to be large gaps by race/ethnicity for veterans below the ALICE Threshold. For example, 77% of White veterans below the Threshold lived in owner-occupied housing, compared to 50% of Black veterans and 60% of veterans of two or more races in Florida in 2019. Within each of those groups, however, veterans below the Threshold had a higher rate of homeownership than those who never served.

Homeownership by Veteran Status and Race/Ethnicity, Florida, 2019	Percent Veterans Below ALICE Threshold who are Homeowners	Percent Never Served Below ALICE Threshold who are Homeowners	
American Indian/Alaska Native	63%	43%	
Asian	73%	69%	
Black	50%	45%	
Hispanic	64%	46%	
Two or More Races	60%	49%	
White	77%	66%	

Renters: In 2019, 19% of veterans (259,661) lived in rental housing in Florida. Veterans who rent had higher rates of financial hardship (44% below the ALICE Threshold) than veterans who owned (26%).

In 2019, veterans below the ALICE Threshold in Florida who were young or Black were more likely to be renters: 48% of veterans age 25–44 below the Threshold were renters, as were 50% of Black veterans below the Threshold. In comparison, 17% of veterans age 75 and older below the Threshold and 23% of White veterans below the Threshold were renters.

Cost Burden: Veterans who are housing cost burdened (paying more than 35% of income on rent or mortgage plus utilities, taxes, and insurance) are more likely to experience housing insecurity and are therefore also at greater risk of becoming homeless.

Overall, 59% of veterans below the ALICE Threshold in rental housing and 37% of veterans below the Threshold in owner-occupied housing in Florida were cost burdened in 2019. Although these rates of housing cost burden are similar to those of people below the Threshold who never served (61% for renters and 37% for owners who never served), they are still much higher than for veterans above the Threshold (11% cost burden for renters and 5% for owners).

The percentage of veterans below the Threshold who were housing cost burdened varied by race/ethnicity in Florida. For example, 41% of White, 47% of Hispanic, and 52% of Black veterans below the Threshold were housing cost burdened.

Among nearby states in 2019, Florida had the higest rates of both rent burden and owner cost burden for veterans below the ALICE Threshold. South Carolina had the lowest rates: 44% of veteran renters below the ALICE Threshold and 30% of veteran owners below the Threshold were cost burdened.

Access to Technology

Access to the internet, digital devices, and assistive technology can be a lifeline for veterans, yet there are digital divides by income, race/ethnicity, disability status, and location. While internet access has become almost ubiquitous across the U.S., in Florida in 2019, veterans below the ALICE Threshold had some of the lowest access rates, even to the most common technological device: a smartphone. Only 77% of veterans below the Threshold in Florida had a smartphone, compared to 87% of people below the Threshold who never served. In addition, veterans are more likely to have disabilities, and people with disabilities are less likely than people without to own a computer or to have internet access. Veterans are also overrepresented in rural communities, where internet access is generally less available.

Nationwide in 2019, 89% of veterans had some type of internet access at home, compared to 92% in Florida. Rates were lower for veterans below the ALICE Threshold in Florida (86%), and lower still for veterans with disabilities below the Threshold (82%). And with the increase in remote work and education, a high-speed internet connection has become more important; yet only 76% of veterans in Florida had high-speed internet in 2019, and that percentage decreased to 63% for those below the ALICE Threshold. The rate was even lower for veterans with disabilities below the Threshold in Florida (59%) who would especially benefit from access to technology, from assistive devices to telemedicine.

Florida had the highest rate of high-speed internet access for veterans below the ALICE Threshold among nearby states (63%); Mississippi had the lowest (42%).

Public Assistance

For a <u>variety of reasons</u>, public assistance does not reach all people in households that are struggling. While most people in poverty are eligible, those in ALICE households often earn too much to qualify for assistance. In addition, income and asset limits for public assistance can create "<u>benefits cliffs</u>" that limit economic mobility.

For example, the income eligibility threshold for one of the most far-reaching public assistance programs in the U.S., the <u>Supplemental Nutrition Assistance Program</u> (SNAP, formerly food stamps), is generally <u>130%</u> of the FPL. Even though all veterans living in households with income below the FPL should be covered by SNAP, only 26% of veterans in poverty (21,413), and a mere 13% of veterans in ALICE households (40,431), participated in this program in Florida in 2019. This means that despite <u>efforts to increase veterans' utilization</u> — including reducing stigma, increasing awareness, and targeting groups at risk of food insufficiency — nearly 340,000 veterans whose families were struggling to make ends meet in Florida did not participate in SNAP.

SNAP coverage of veterans below the ALICE Threshold varied slightly across nearby states, from 13% in South Carolina to 17% in Mississippi. Florida, Georgia, and Alabama had the same coverage rate (15%).

The VA provides disability compensation for an illness or injury that was caused by or became worse due to active military service. Benefits are based on the severity of the veteran's service-connected disability; the more severe the disability, the higher the VA disability rating, up to a maximum of 100%. Yet even with a 50% rating, which covers disabilities such as PTSD, impaired memory, and panic attacks, in 2019, the amount of the disability benefit did not come close to covering the cost of the ALICE Household Survival Budget anywhere in Florida. For example, a veteran with a disability rating of 50% living with a spouse and a child received only \$12,316 in 2019. The actual cost of basic needs was several times that, with the average Household Survival Budget for a family of three ranging from nearly \$45,200 in Hamilton County to just over \$66,200 in Monroe County.

Veterans with a disability may also be eligible for <u>Social Security Administration benefits</u> along with or as an alternative to their VA benefits. Unlike VA benefits, SSI and SSDI do not require a recipient's disability to be service-related. Yet to qualify, the disability must be expected to last for 12 months or longer and impact gainful employment. Veterans may also access Medicaid and Medicare health benefits when eligible for SSI and SSDI. Yet rules for participation are complex and impact payments and participation. For example, in 2019, only 5% of veterans below the ALICE Threshold in the U.S. received SSI payments.

Health Insurance

Access to health insurance is critical to both wellness and financial stability for veterans. Almost all veterans in Florida (96%) had some form of health insurance in 2019, and many had more than one type. Because of Medicare, all senior veterans in Florida had health insurance. For veterans under age 65, 8% had no health insurance, a lower rate than for people who never served (20%). Of veterans without health insurance in Florida, 43% were below the ALICE Threshold.

Most veterans under age 65 in Florida had private health insurance (75%), a higher rate than among those who never served (69%). Of veterans with private insurance in this age group, 20% were below the ALICE Threshold.

At the same time, 103,892 veterans under age 65 in Florida relied on public health insurance (Medicaid and/or Medicare) or military health plans (TRICARE and/or VA health care) in 2019. Of those, over half (54%) were below the ALICE Threshold. However, not all veterans struggling to make ends meet were covered by these health insurance programs: 35% of veterans age 17–64 and living below the ALICE Threshold in Florida (61,303) were not enrolled in Medicaid, Medicare, TRICARE, or VA health care.

Veterans with disabilities may have extra health care needs and constraints to their earning potential. Therefore, not surprisingly, veterans with disabilities living below the Threshold in Florida were more likely to be enrolled in a TRICARE/VA program than veterans without disabilities below the Threshold (58% vs. 49%).

Among nearby states, Mississippi had the highest rate of veterans (age 17–64) below the ALICE Threshold not enrolled in a TRICARE/VA health care program (57%). Florida had the lowest, at 47%.

IMPACT OF THE PANDEMIC

The inequities and barriers to financial stability that many veterans face were exacerbated during the dual health and economic crises of the COVID-19 pandemic. For veterans below the ALICE Threshold, there were additional challenges related to limited income/savings and meeting basic needs — challenges that are hidden by national averages.

For many veterans with disabilities, the <u>challenges</u> were even more substantial, and included a higher susceptibility to severe illness and death, limited options for those in congregate settings to transition to community settings, an extensive shortage of direct care and support workers, and additional costs related to personal assistance, home accommodations, and transportation.

As shown in our 2021 report <u>The Pandemic Divide</u>, households below the ALICE Threshold suffered disproportionately during the pandemic. Expanding on these findings, we report our analysis of the Federal Reserve Board's <u>Survey of Household Economics and Decisionmaking</u> (SHED) (October–November 2021), which reveals that veterans below the ALICE Threshold were more likely than veterans above the Threshold to be adversely impacted by the pandemic:

Difficulty getting by financially: Overall, 17% of veterans in the U.S. reported that they were struggling financially (finding it difficult to get by or just getting by), compared to 23% of people who never served. Yet there was a large gap by income: Below the ALICE Threshold, 36% of veterans and 41% of people who never served were struggling, compared to 10% of veterans above the Threshold.

- Change in financial status: While many veterans in the U.S. (43%) reported that their household financial status did not change much over the last two years, the pandemic has been tough on veterans who were already struggling to afford the basics: 29% of veterans below the ALICE Threshold reported being worse off (much worse off or somewhat worse off) than 12 months ago, and 33% reported being worse off than 24 months ago. Rates were similar for those who never served.
- Rainy day funds: Across the U.S., 71% of veterans reported that they had set aside emergency or rainy day funds that would cover their expenses for three months in the event of sickness, job loss, economic downturn, or another emergency. Yet there was a considerable difference according to income: Only half (49%) of veterans living below the ALICE Threshold had an emergency fund, compared to 80% of veterans above the Threshold. Rates for those who never served were substantially lower: Only 58% reported having a rainy day fund, and even fewer below the ALICE Threshold (38%) had one.
- Credit alternative financial services: Military personnel have long been targeted for alternative financial products such as nonbank money order or check cashing, payday loans, pawn shop loans, auto title loans, and tax refund advances. Nationally, veterans overall were slightly less likely than those who never served to use credit alternative financial services (14% vs. 16%).

Yet even with <u>legislation limiting the marketing and abuses of these services</u>, veterans below the ALICE Threshold were twice as likely as those above the Threshold to have used a credit alternative financial service in the last 12 months (22% vs. 11%). Rates were slightly higher for those below the Threshold who never served.

- Unexpected medical expenses: Veterans below the ALICE Threshold in the U.S. were more likely than those who never served to incur an unexpected major medical expense that they had to pay for out of pocket because it was not completely paid for by insurance (25% vs. 19%).
- Food insufficiency: Throughout the pandemic, many veterans struggled to afford food. Veterans below the ALICE Threshold in the U.S. were almost five times as likely as veterans above the Threshold to have received free groceries or meals through a food pantry or religious or community organization (19% vs. 4%). Rates were similar for those who never served.

Mental health: Across the U.S., veterans below the ALICE Threshold were twice as likely as those above the Threshold to have needed mental health care or counseling but gone without because they couldn't afford it (6% vs. 3%). But rates were even higher for people who never served, both below and above the Threshold (14% vs. 5%). Mental health (or "invisible wound") conditions that go untreated can negatively impact personal and professional relationships, work productivity, quality of life, and overall well-being for both veterans and their families. Treating mental health issues early can also reduce additional adverse consequences and help contain costs of caregiving.

The Military Times/Institute for Veterans and Military Families 2020 Survey (March 26–March 31) also documented widespread concern and need for additional resources during the pandemic. Nationwide, veterans reported that they would like access to and availability of medical care (77%); resources related to day-to-day life in their community (59%); assistance with veteran education, disability, health, and loan programs (44%); money management, insurance, tax assistance, and living assistance (41%); veterans' court services, available and accessible legal aid (35%); and access to and availability of mental health services (32%).

There were some key differences in need by gender and race/ethnicity. By gender, the percentage of females reporting that they would like resources was greater than for males in almost all categories. The biggest gaps were in access to and availability of services and resources for education (56% of females vs. 31% of males); access to and availability of services and resources for children's education (41% vs. 28%); and access to and availability of mental health services (54% vs. 31%).

By race/ethnicity, Black, Hispanic, American Indian/Alaska Native, Asian, and Native Hawaiian/Pacific Islander veterans — grouped together in the report as "minority" veterans — were more likely than White veterans to report needing medical care (82% vs. 76%), community support (64% vs. 58%), and benefits and claims assistance (60% vs. 41%).

The Wounded Warrior Project's (WWP) <u>Annual Warrior Survey</u> (June 2-August 30, 2021) provides additional national context about the needs of younger, more recent veterans (those who served post-9/11) who have a service-related mental or physical injury, illness, or wound. Overall, for these veterans, mental health problems were more than twice as common as physical problems.

For those who reported needing the aid or assistance of another due to an injury, health and/or mental health issue, their spouse was by far the most common caregiver (75%), followed by parents or siblings (8%) and children (3.5%). Hours of caregiving varied, with 43% needing less than 20 hours per week while 30% needed 40 hours per week or more.

LESSONS FROM ALICE VETERANS FOR ALL ALICE GROUPS

This first analysis of veterans living in financial hardship using the ALICE metrics finds that nationally in 2019, veterans were less likely to have income below the ALICE Threshold than those who never served in the military (27% vs. 35%). The same held true in Florida: 29% of veterans were below the Threshold, compared to 41% of those who never served. This difference begs the question: Are there unique characteristics, experiences, or benefits associated with military service or veteran status that promote increased financial stability?

The ALICE data suggest three factors that help explain veterans' relatively better financial status: Veterans are more likely to be working full time, to own their own home, and to have health insurance and access to VA health care benefits and disability compensation.

Employment: Of people in the labor force in Florida (age 17–64), veterans were more likely to have the stability of full-time employment (86%) than those who never served (77%).

Homeownership: Overall, most veterans in Florida (81%) lived in owner-occupied housing units in 2019, a considerably higher rate than for those who never served (67%). This gap may in part be explained by the fact that veterans, as a group, are older, and homeownership increases with age. But even for those in their prime working years (25–64), veterans fared better: 73% of veterans owned their own home, compared to 64% of those who never served.

Health coverage and benefits: Most veterans under age 65 in Florida had private health insurance (75%), a higher rate than among those who never served (69%). In addition, 50% of veterans were enrolled in TRICARE or VA health care – programs that can be combined with private insurance and Medicare or Medicaid for those who are eligible, to provide more comprehensive health coverage.

VA health care benefits, along with disability compensation, are critical resources for veterans with disabilities. Veterans are more likely to have disabilities than those who never served, and the presence of a disability is one of the biggest drivers of financial hardship. Yet in Florida in 2019, veterans with disabilities were much less likely to face financial hardship: 36% of veterans with disabilities and 25% of veterans with service-related disabilities lived in a household with income below the ALICE Threshold, compared to 55% of those with disabilities who never served.

This ALICE in Focus: Veterans research also suggests that veteran status may contribute to reducing, but not eliminating, financial hardship in certain populations. For example, in Florida in 2019, the gap in financial hardship between male and female veterans was narrower than the gap between male and female nonveterans. The same was true for racial/ethnic gaps: Differences in the rates of financial hardship were narrower between White, Black, and Hispanic veterans than between White, Black, and Hispanic people who never served.

The transition from military to civilian life as a veteran is not free of challenges, and the benefits of service and veteran status are not experienced equally across all populations. Yet these findings suggest that more research would be worthwhile to better understand veterans' experience and the supports they receive, and to identify how these could be transferred to the general population in order to reduce financial hardship for all.

ALICE IN FOCUS: VETERANS - INCOME STATUS BY STATE, 2019

NEXT STEPS

Capturing the true extent of financial hardship among veterans is critical for the appropriate allocation of funds for programs in areas such as education, health care, food access, housing, and employment. There's a lot more to be done to change the trajectory for veterans who are struggling to make ends meet. Visit UnitedForALICE.org to learn more, then share this data with stakeholders in your community.

Learn more with:

- The ALICE Veterans Data Dashboard, to dig deeper into demographics and local geographies
- Resources related to veterans and financial hardship, including the references linked in this Research Brief, as well as additional resources that offer important context and even deeper analysis
- <u>The Pandemic Divide: An ALICE Analysis of National COVID Surveys</u> (2021) and other resources on the <u>COVID-19 and ALICE</u> webpage, to see the impacts of the pandemic on ALICE
- The ALICE Wage Tool, to explore wage levels by geography and occupation

Connect with stakeholders:

- Contact your local United Way for support and volunteer opportunities.
- Connect with members of the committees that support this work, including the ALICE in Focus National Research Advisory Committee for Veterans, and the ALICE in Focus National Leadership Committee for Veterans.
- Find your state and federal representatives and see ALICE household data by legislative district with our ALICE Legislative District Tool.

Be an ally and advocate for better data:

- Advocate for more accurate data collection by the <u>U.S. Census Bureau</u> for veterans who have been <u>historically undercounted</u>, <u>including</u> (but not limited to) people experiencing homelessness, people of color, <u>individuals who identify as LGBTQ+</u>, and people in low-income and hard-to-count geographic areas.
- Support improved veteran demographic data collection, analysis, and data sharing by the VA to enhance understanding of the veteran population and their specific needs.

United For ALICE is a driver of innovative research and action around financial hardship, with a commitment to <u>racial and economic justice</u> for ALICE. The ALICE data and analysis are shared with United Ways, corporations, foundations, government, and nonprofits, to inform policy and promote positive change. The **ALICE in Focus Series** utilizes ALICE measures to analyze the U.S. Census Bureau's American Community Survey (ACS) Public Use Microdata Samples (PUMS). For more details about the methodology for the ALICE in Focus Series, go to <u>UnitedForALICE.org/Methodology</u>.

United For ALICE partners with **United Way of Florida** to bring the ALICE research to Florida.
